Profile

Computer Engineering professional in training, with experience in software development, IT infrastructure administration, and DevOps practices. Specialized in web applications, process automation, and system optimization. Focused on continuous integration, problem-solving, and the improvement of technological infrastructures.

Work Experience

Student Researcher - Universidad Nacional de La Matanza

Mar. 2022 - Mar. 2024 Buenos Aires Province, Argentina · Hybrid

Worked on the real-time integration of the Unlam Ground Segment (UGS) using websockets. We performed stress tests on our backend technology to confirm its viability and understand our limits. Additionally, we collaborated on the integration with the Satnogs network API and the update of the integration with NASA OPENMCT.

IT Infrastructure Administrator - Municipality of Lomas de Zamora

Aug. 2022 - Sept. 2023 Buenos Aires Province, Argentina · On-site

Responsible for managing and maintaining Windows and Linux servers, VPNs, virtualizers, web applications, domain controllers, camera systems, and network infrastructure. Configuration, installation, and maintenance of servers, deployment of web applications, troubleshooting of camera systems, implementation of security policies, development of scripts for automation, technical support, and resolution of IT infrastructure issues.

Full Stack Developer / DevOps Engineer - RDigital (Dealshop S.A.)

Sept. 2023 - May 2024 Buenos Aires Province, Argentina · Hybrid

Software development for e-commerce using NodeJS, React, NestJS, and PostgreSQL. Website maintenance, including its documentation, deployment using Docker-Compose, updates (GitHub Actions), and cloud hosting (Hostinger - AWS). Worked as a developer for the maintenance and optimization of the site.

DevOps Engineer - Accusys Technology

May 2024 - Present Autonomous City of Buenos Aires, Argentina · Hybrid

As an SSR DevOps at Accusys Technology, I manage and optimize CI/CD pipelines using Azure DevOps and GitHub, automating deployments and infrastructure under Infrastructure as Code practices. I work in cloud environments ensuring software performance, security, and quality, collaborating with multidisciplinary teams. I use tools such as Jenkins, Ansible, SonarQube, Jira, and Git, and develop internal tools for artifact and CI/CD repository management with React and Node.js.

Skills

Frontend

HTML, CSS, JavaScript, ReactJS, Next.js, TypeScript, Material-UI, Bootstrap

Backend

NodeJS, Express, NestJS, PostgreSQL, MySQL, MongoDB, REST API, Microservices

DevOps

Docker, Kubernetes, Jenkins, Ansible, CI/CD, Git, GitHub Actions, Nginx, AWS, Hostinger, Azure DevOps

Infrastructure and Systems

Linux/Windows Server Administration, Virtualization (VMware, VirtualBox), Networks, VPN, Domain Controllers

Education

Universidad Nacional de La Matanza · 2019 - Present Degree: Computer Engineer - In Progress

Well-rounded professional with solid theoretical and practical knowledge in engineering, design, management, and computer science. Capable of solving problems, researching, and adapting to different work environments, including the globalized software industry, to contribute to a technological society.

Secretaria de Economia · 2022 - 2023 Degree: Full Stack Web Developer - Completed

Solid knowledge in Angular, Spring Boot, MySQL, TypeScript, Java, SQL, agile methodologies, and design patterns. Ability to develop complete web applications, from frontend to backend, optimizing system performance and efficiency. Adaptable to the latest technologies and development practices.
